KEY FEATURES OF AGENTFORCE FOR DEVELOPERS

Dev Assistant

**Inline
Autocompletions**

**Test Case
Generation**

DEV ASSISTANT USE CASES

**Ask coding
questions**

**Write SQL
queries**

**Ask about your
own project**

**Generate code
templates**

Explain code

**Convert
JSON ↔ Apex**

Refactor code

**Add code
comments**

**Generate LWC
code**

**Generate Apex
(methods, classes
& triggers)**

**Generate test
classes**

TIPS FOR WRITING GREAT PROMPTS

Action

**Create an Apex batch class named
OpenPositionMatcher**

Context details

**that processes Position__c records created within the past
15 days. The class should match these open positions with
suitable candidates based on their skills.**

(Tip: Ground your prompt with your org metadata.)

Best practices

**Order the results by candidate names in descending order.
Make sure the generated code follows security best
practices. Separate operators with a new line.**

Additional context

The class is used in an LWC component.
(Tip: The more details you add, the more accurate the
response will be.)
